

<p>The easiest way to answer this question is to solve for x first.</p>	<p>The easiest way to answer this question is to solve for x first.</p>
<p><b>Which of the following is a solution for the inequality below?</b></p> $6x + 15 \leq 8x + 10$ <p>A) -8      C) -6 B) -2      D) -10</p>	<p><b>Which of the following is a solution for the inequality below?</b></p> $2x + 1 > 4(3x - 2)$ <p>A) 0      C) 8 B) 2      D) 9</p>
<p>The easiest way to answer this question is to plug in the answer choices.</p>	<p>The easiest way to answer this question is to plug in the answer choices.</p>
<p>Subtracting 9x from both sides is the best first step.</p>	<p>Subtracting 11 from both sides is the best first step.</p>
$9x + 32 > 5x$	$11 - 4x \leq 6x + 1$
<p>Subtracting 5x from both sides is the best first step.</p>	<p>Adding 4x to both sides is the best first step.</p>
<p>Subtracting x from both sides is the best first step.</p>	<p>The best first step is _____.</p>
$x - 7 < x - 8$	$2x + 1 > 4(3x - 2)$
<p>Adding 7 to both sides is the best first step.</p>	<p>The easiest mistake to make is _____.</p>
